

Security to Fit Your Needs

Businesses, Schools, Computer Dealers, and Service Bureaus can save time and money by using A.M.E.

Businesses

- Secure confidential information with the method that is most efficient for your organization.
- Maintain order on a Macintosh that is used by several people.
- Give different employees access to only the files and programs they need to use.
- Track computer time for different projects.
- Prevent losses of time and data caused by virus infections.

Govt. Classified Environments

- A.M.E. is the most complete security solution for the Macintosh.
- A.M.E. has many of the security features required for C2 certification.
- Multi-pass erase meets Dept. of Defense standards.

Universities

- Give Students the ability to use programs in computer learning centers without being able to make illegal copies.
- Lock out unauthorized programs.

Services

- Maintain the structure and integrity of the software on your hard disk.
- Limit customers' access to only what they need.
- Protect your hard disk from viruses.
- Keep track of computer use by time, user, and/or activity.

Computer Dealers

- Allow customers to experiment without creating chaos on the hard disk.
- Prevent illegal copying of software.
- Make A.M.E. transparent to your customers with Auto Sign-on.
- Lock out viruses.
- Control who can use laser printers, scanners, modems, etc.

Home Office/Personal

- Prevent a curious child from damaging financial records and other important data.
- Use the Activity Log to differentiate business activities from personal computer use for the IRS.

A.M.E.

Security to Fit Your Needs ***Avoid Chaos with Multiple Users*** ***Record Activities on Your Mac***

File Options

Set access privileges for files, folders, programs, and disks. Select two groups of users and select the type of access each group has.

- No access
- Read, but not write
- Run, but not copy programs
- No restrictions

Select the level of security you need with one or more of the following options.

- Protected without Encryption
- Fast Encryption
- DES Encryption (U.S. only)
- Key disk required for access
- Password required for access

Access Sets

Files, folders, programs, and disks can be grouped together in an Access Set and given identical access privileges and protection. This feature simplifies the setting and modification of protection methods, passwords, key disks, and user access on large numbers of files, etc.

Activities Log

This feature records the activities that take place on your Mac. It can be used to bill clients accurately for computer work, monitor activities, or maintain computer-use records for the IRS.

Log Options:

- Define activities to be logged
- Define users to be logged
- Filter for viewing specific activities and/or users
- Print as filtered
- Export to a database, spreadsheet, or word processor
- Control user access to the log

Contextual Help

On-line help is available for the window that is currently being used. If the "Activities Log" window is open, help for the Activities Log will come up when the help button is clicked. Users do not have access to help on features they do not have privileges for.

A.M.E.

Continuous Viral Protection **Secure Sensitive Information** **Stop Illegal Copying**

Global Options

Viral Protection

Computer viruses can invade your Macintosh when an infected program is run. Lock out viruses or unauthorized programs by setting A.M.E. to run only trusted software. When you are sure that your computer is free of viruses, you can register your software with A.M.E. Then only those trusted programs on your disk can be used. No infected programs will be able to run on your Macintosh, and the System Folder will be protected from viral damage.

True File Erase

When you delete a file on a Macintosh, the file is removed from the disk directory but the data remains on the disk. A.M.E. can be set to erase the actual data. Another option is multi-pass erase to meet Department of Defense standards.

Alerts

An audio and/or visual alert can be set to inform the user that access has been denied.

Sign On/Off Options

Password Options

The level of password security can be controlled with the following settings:

- Require minimum length
- Require case sensitivity
- Require periodic change of passwords
- Check for similarity of passwords

Auto Sign-Off

Timed sign-off with multiple-monitor blackout can be set to hide your data when you step away from your Mac. Sometimes a quick trip to the water cooler can turn into an extended meeting. A.M.E. can be set to black out and sign off after a specific interval, so only authorized users can log on and see your data.

Auto Sign-On Option

Allows easy access for a default user. A user with low-level privileges can be automatically signed on when the Mac is started. The user does not need to be aware of A.M.E. The Mac will start up without the password window, but all the restrictions set for the default user will be in effect. Schools, service bureaus, and other businesses will find this useful for giving unsophisticated users access to a Mac while preventing them from getting into trouble.

A.M.E.

COMPREHENSIVE VIRAL PROTECTION

Continuous screening
Run trusted software only
Checks code size
Checks code contents
Independent self check

FILE PROTECTION

Encryption Types...

DES
Proprietary
Auto-encryption
Auto-decryption
Manual decryption

Encrypts...

Documents/files
Applications
Folders
Disks
Access sets
Original file
Encrypts copy

File Password Protection

Case sensitive
Can require minimum length

FILE MANAGEMENT

Access Settings...

Global
User-specific

File Access

Locks files
Locks applications
Locks folders
Protects files
Protects applications
Protects folders
Read, not write
Run, not copy programs

DISK ACCESS

Prevents floppy disk insertion
Locks hard disks
Prevents initialization
Password protection
Key disk option
Password override

HIERARCHICAL USER STRUCTURE

Unlimited levels & users
Individual user preferences
Protect System Folder
Lock desktop appearance
Restrict DA access
Restrict printer use
Restrict modem use

User Password Protection

Case sensitive
Require minimum length
Option to force periodic change
Auto sign-on default user

Administrator Functions

Auto installer/updater
Installer scripting
Settings extractor/propagator

LOGGING

User log
Comprehensive activity logging
Customizable log
Log exportable
Filter for viewing/export.

ONLINE HELP

Contextual help
Access privilege protected

MISCELLANEOUS

True file erase
Dept. of Defense file erase
Disallow debuggers
Continuous self monitoring
Control Chooser name
Lock up after inactivity
Control with keyboard

\$895
\$1495

"A.M.E. sets New Security Standard" *MacWEEK Jan 16, 1990*

5 Mice award *MacUserUK*

Additional Benefits

Increases in Productivity

- Decreases down time on computers by preventing unauthorized software or virus infections
- Monitors and records the amount of time spent on a job
- Reduces maintenance costs
- Secures and controls access to sensitive information
- Reduces unauthorized use of hardware & software
- Activities Log
 - Provides accurate computer records for IRS
 - Keeps accurate records for client billing
 - Creates software & hardware utilization reports which can be used to reduce operating costs
 - Helps identify people who need extra training
- Reduces training cost by consolidating security and virus products
- Reduces time spent cleaning up desktops and reorganizing hard disks
- Special management tools help set up and maintain security in multi-Mac environments

Flexibility

- You can simplify a user's environment by only giving them access to the tools they need
- Allows you to select the level of security you need, ranging from simple low level security to the highest security available on a Macintosh

Cost Savings

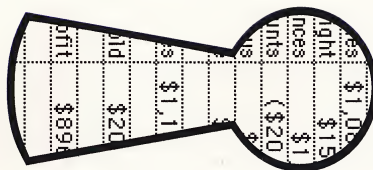

- A.M.E. integrates virus protection, security, and management features that could not be duplicated even by spending \$700-800 or more on other products
- Prevents illegal copying of software
- Reduces training and support costs
- 5 and 10 packs are heavily discounted and custom serialization is available for any number of Macintoshes you need to secure

Available From...

single unit \$279
5-site pack \$895
10-site pack \$1495
